Shibori Directions

KAMOSAGE KNOT

This knot allows the worker to remove the binding thread by just pulling the cloth, and the knots pop right off.

TSUKIDASHI KANOKO

'spaced dots' binding

Traditionally, a blunt needle is used to form each bound point in the cloth, and each point is secured with a *kamosage knot*.

A simplified process:

1. Pinch a tiny piece of cloth with your non-dominant hand. Hold the cloth between your thumb and forefinger about 1cm away from the point.
2. Loop the thread around the cloth and tie a knot to secure. Wind thread around the cloth (more wraps = thicker line).
3. Repeat across the cloth, maintaining the same number of wraps with the thread. It is not necessary to tie a knot every time.

Spaced dots (*tsukidashi kanoko*)

KUMO SHIBORI

'spiderweb' binding

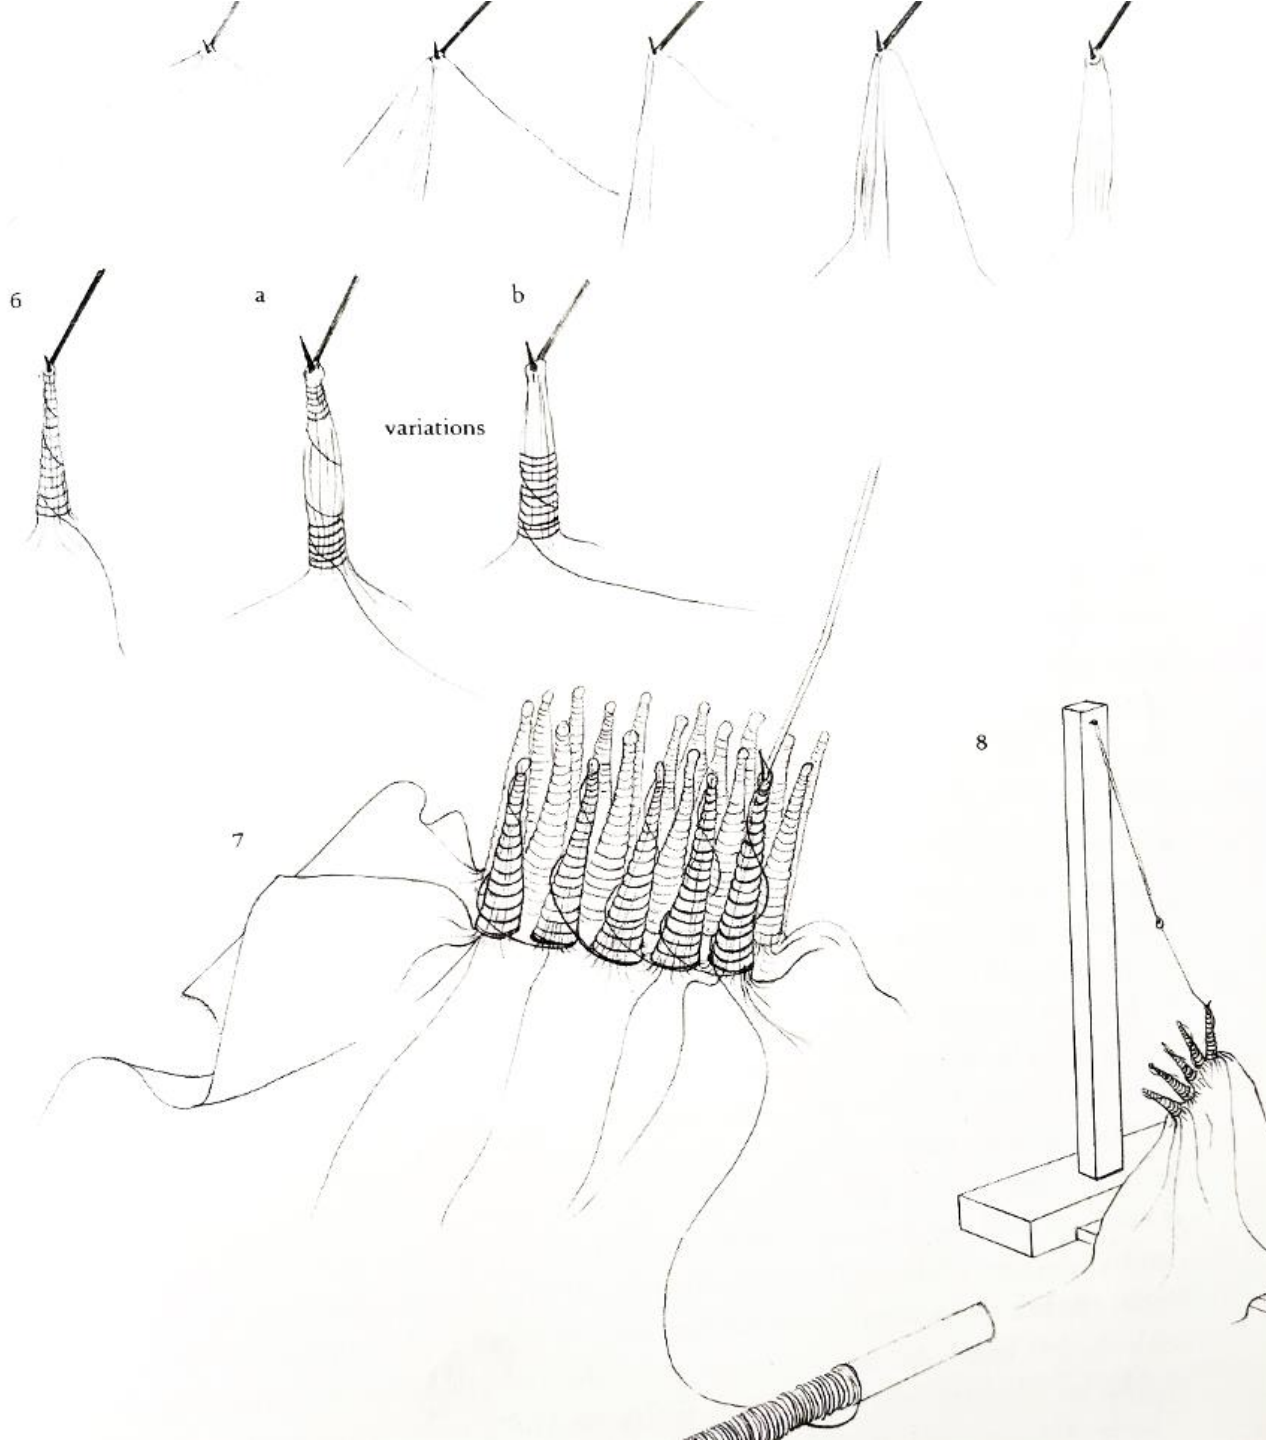

This is a very old shibori technique – a variation has been in use since the 12th century.

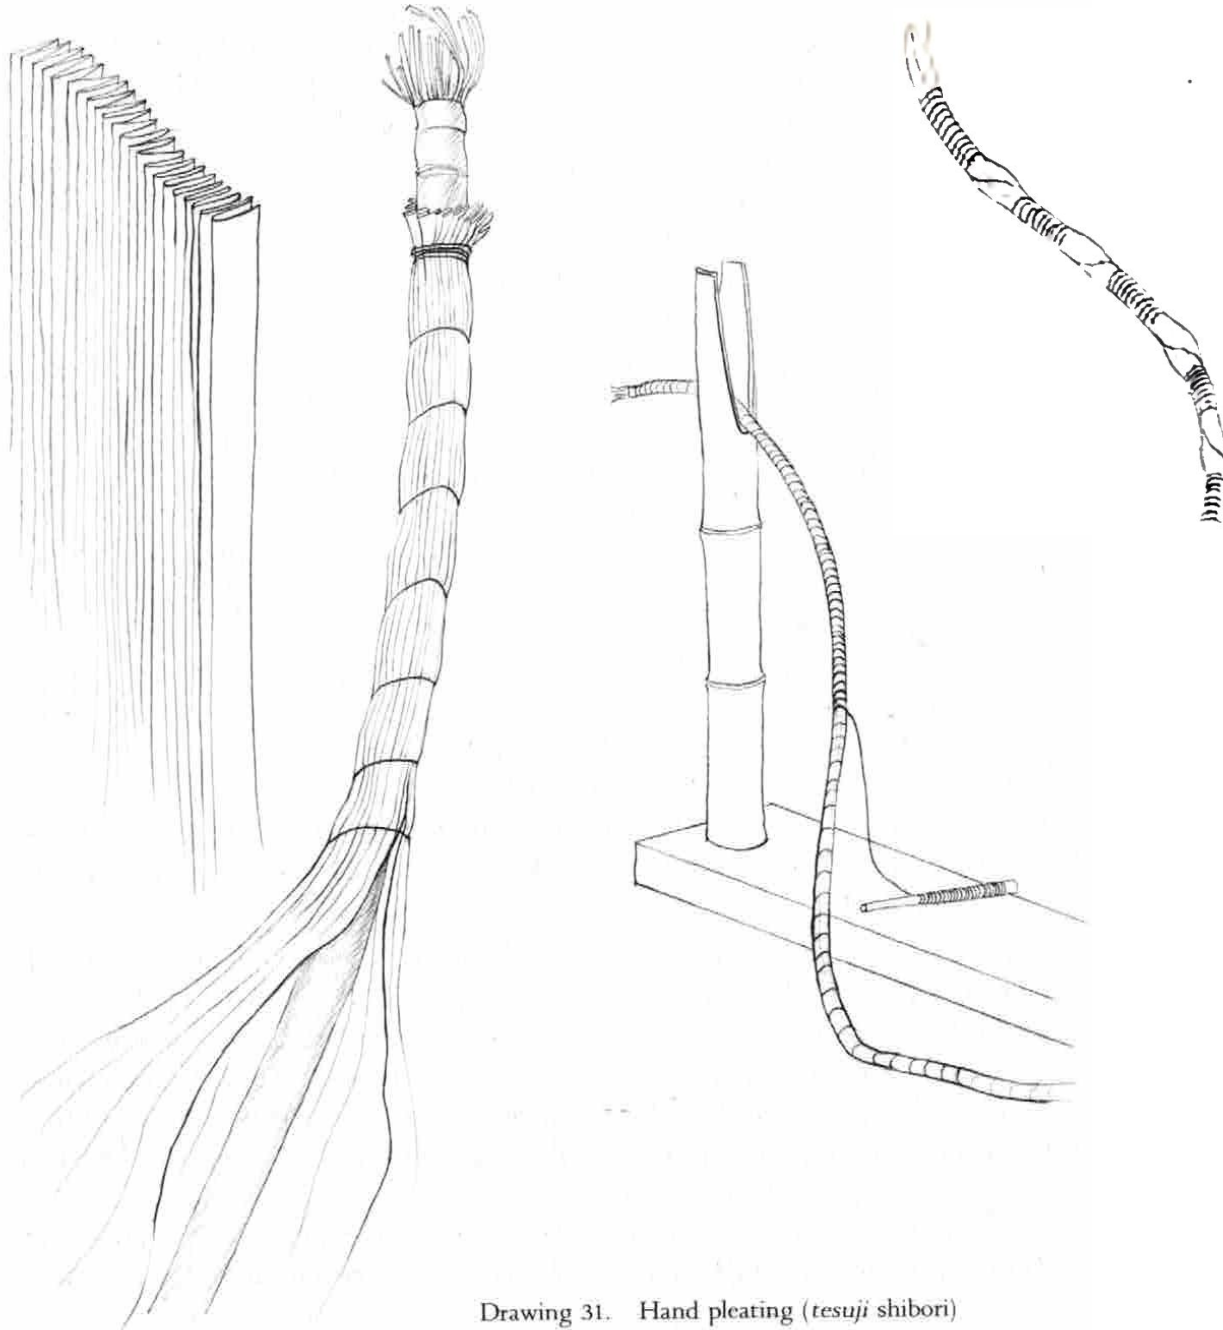

The 'spiderweb' motifs can be isolated, spaced out across the cloth or positioned so close together that there is no background colour to the design.

The process:

1. Pinch cloth into a point.
2. Gather the loose edges of the cloth surrounding the pinched area into tiny pleats.
3. Wrap thread around the pleated cloth.

Drawing 31. Hand pleating (*tesuji shibori*)

TESUJI SHIBORI

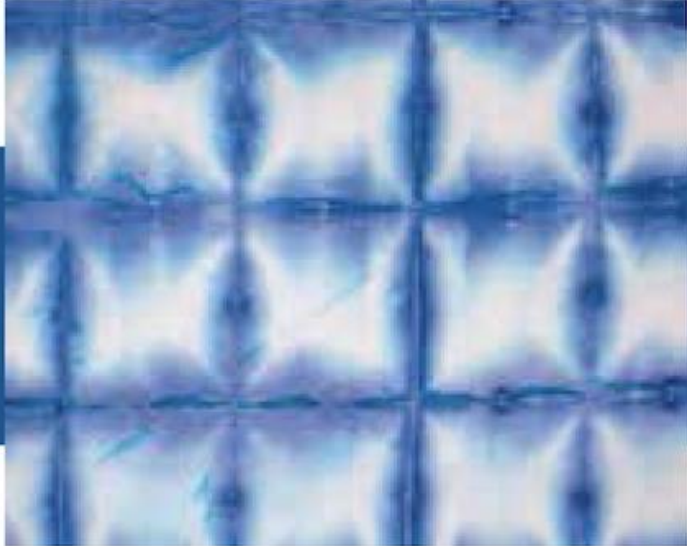

pleating & binding

Process:

- Fold cloth into vertical pleats. You can use an iron to help hold them in place!
- Wrap thread around the cloth strip in a regular spiral or in blocks.

ITAJIME (Square)

1. Wet fabric and lay it flat on a clean work surface.
2. Accordion fold or 'fan fold' the fabric in 4" wide sections down the length of the fabric. This will form a long rectangle. For more pattern variations, vary the size and width of the sections.
3. Fold one end of the rectangle into a square. Now fold the square back and forth, creating a stack of folded squares.
4. Place folded square between plastic squares and secure with rubber bands or twine.

ITAJIME (Triangle)

1. Wet fabric and lay it flat on a clean work surface.
2. Accordion fold or 'fan fold' the fabric in 4" wide sections down the length of the fabric. This will form a long rectangle. For more pattern variations, vary the size and width of the sections.
3. Fold one end of the rectangle into a triangle. Now fold the triangle back and forth, creating a stack of folded triangles.
4. Place folded triangle between plastic squares and secure with rubber bands or twine.
